

## BOISE COUNTY SOLID WASTE

# DISPOSAL OF PAINT

## Boise County Transfer Stations do not accept liquid paint for disposal.

Paint must be dried before disposal at any Boise County Solid Waste Transfer Station. Customers should plan accordingly and buy only enough paint needed for the job. Leftover or waste paint may be mixed with sawdust, sand, kitty litter, soil or other absorbent material or allowed to air dry. This applies to latex and oil-based paints and stains. **Remove lids from paint cans when coming to the Transfer Station** so that the site attendant may inspect the paint cans prior to disposal in dumpsters or on the tipping floor.

Boise County will only accept household quantities of dried paint waste; limit 5 gallons per visit. Boise County does not accept paint waste from Conditionally Exempt Small Quantity Generators (CESQG's); i.e. paint shops and painting contractors.

Solid Waste Transfer Stations do not accept paint  
thinners and lacquer thinners or other flammable  
material.

If you have questions please contact the
